

nora[®] pro clean system Reduces Maintenance Costs and Promotes Health Benefits for Grand Valley School District

The Grand Valley School District in Orwell, Ohio, made the unconventional decision to bring together five different buildings serving students in pre-kindergarten through grade 12 into one 244,000-square-foot facility. The new building carefully splits up elementary school students from older middle and high school students. To serve the needs of such a diverse student body, school administrators carefully researched and tested a number of products and materials for their new facility.

“Our goal was to create a healthy, sustainable environment for our students and staff while keeping costs down,” said William Nye, superintendent Grand Valley School System. “Since we were outfitting such a large area, choosing a proper flooring solution was a major decision for us.”

Ultimately the school system selected rubber flooring from nora systems, Inc. for a large portion of the renovation, installing 130,000 square feet of nora[®] products throughout the facility. According to Nye, they chose nora because of its comfort underfoot, durability and maintenance benefits. To support its maintenance requirements, the district decided to use the nora pro clean system, a unique floor cleaning system that reduces maintenance time and costs by eliminating the use of harsh detergents and chemicals during the cleaning process.

“The nora pro clean system helps keep our flooring looking like it had just been installed,” added Nye. “With nearly 1,500 students

walking through these halls on a daily basis, the floors go through a lot of wear and tear, but you would never know that by looking at them.”

In addition to time and cost savings, the district also appreciates the health benefits the unique cleaning system offers. “The absence of chemicals really helps to improve the indoor air quality of the school and provides a healthy learning environment for our students and our staff.”
